

RESEARCH INTEREST

Long's research focuses on advancing optimization techniques for multi-objective deep neural networks. He specifically investigates optimization methods to improve model robustness, safety, and helpfulness simultaneously. A key area of his work involves scaling these effectiveness measures to large-scale applications, particularly Large Language Models (LLMs).

EDUCATION

PhD	Singapore University of Technology and Design (SUTD)	09/2024 – Present
- Academic advisors: Asst. Prof. Wenxuan Zhang and Prof. Wei Lu. - Major: Artificial Intelligence.		
Bachelor	Hanoi University of Science and Technology (HUST)	08/2018 – 09/2022
- Academic advisor: Dr. Thang N. Tran - Major: Mathematics and Informatics. CPA: 3.11/4.00 (Rank 18 out of 94 in his department).

EXPERIENCE

PhD Student	The inclusive NLP Lab
Advisor: Prof. Wei Lu and Asst. Prof. Wenxuan Zhang	
<i>How Enhanced Safety Awareness Leaves LLMs Vulnerable to Posterior Attack</i>	10/2025 – 05/2026

[†]Co-First Author

- Developed Posterior Attack, a single-query jailbreak method that demonstrates high efficacy against a wide range of LLMs, including GPT-5 and Claude 4.6.
- Using Bayesian inference, developed a theoretical framework showing the Safety Paradox between LLM internal safety-awareness and its vulnerability under Posterior Attack (accepted to EMNLP 2026).

Multilingual Fine-Tuning via Localized Gradient Conflict Resolution

01/2026 – 05/2026

- Formulated multilingual fine-tuning as a multi-objective optimization (MOO) problem, then developed distributed gradient-based MOO training to improve LLM performance up to 4% (submitted to NeurIPS 2026).

Difficulty-Diversity Collaborative Filtering for Data-Efficient LLM Fine-Tuning

04/2025 – 12/2025

- Developed a collaborative filtering framework to select a small, challenging, and diverse dataset personalized for a given language model (accepted to ICLR 2026).
- Empirically validated that fine-tuning with 1,000 high-quality examples selected via our method yields better performance than using the entire 220,000-example dataset.

Research Assistant

College of Engineering and Computer Science, VinUniversity

Advisor: [Asst. Prof. Dung D. Le](#)

Expensive Multi-Objective Optimization

03/2023 – 10/2023

- Approximated the entire trade-off curve of black-box objects using Pareto Front Learning with Hypernetworks computed by Gaussian Processes (accepted to AAAI 2025).

Profiling the Pareto Front in Multi-Task Learning

02/2022 – 10/2022

- Proposed a novel method named Multi-Sample Hypernetwork to approximate the entire trade-off curve of conflicting objectives (accepted to AAAI 2023).

Undergraduate Research Assistant

School of Applied Mathematics and Informatics, HUST

Advisor: [Dr. Tran Ngoc Thang](#)

Multi-Objective Optimization with Completed Scalarizations

02/2022 – 02/2023

- Proposed and proved the convergence of a new framework for Pareto Multi-Task Learning with Scalarization Functions in the pseudo-convex and quasiconvex assumptions (accepted to the journal Neural Networks).

ADWARDS & CERTIFICATES

- AISG PhD Fellowship, granted by AI Singapore, Sep 2024 – Sep 2028.
- Certificate of Completion of Developer Circles Vietnam Innovation Challenge in Data Science, sponsored by Facebook, Nov 2020.
